SEMINAR PRESENTATION

Context & Issues

Agriculture is a vital economic pillar, essential for food safety, but it is also responsible for major environmental challenges such as deforestation, soil erosion, and water pollution. Faced with a state emergency and population growth, we are currently aiming to evolve agricultural practices to ensure food safety while limiting their ecological impact.

At strategies, innovations, and policies can enable a transition to truly sustainable agriculture in the context of tensions between growing resource needs and planetary boundaries?

Objectives

Collaborate with scientists, experts, professionals, and decision-makers to find balanced solutions that are both viable and environmentally responsible.
